

BJ Series Long Sensing Distance/BGS Reflective/Micro Spot Type

Compact And Long Sensing Distance Type

■ Features

■ Long distance sensing type

- High performance lens with long sensing distance
 - Through-beam type: 15m
 - Diffuse reflective type: 1m
 - Polarized retroreflective type: 3m (MS-2A)
- M.S.R. (Mirror Surface Rejection) function (polarized retroreflective type) for detecting mirrors or highly reflective targets
- Compact size: W10.6 × H32 × L20mm
- Light ON/Dark ON operation mode switch
- Sensitivity adjuster
- Built-in reverse polarity protection circuit and output overcurrent (short-circuit) protection circuit
- Mutual interference prevention function (except through-beam type)
- Excellent noise immunity and minimal influence from ambient light
- IP65 protection structure (IEC standard) / IP67 for BJ-C connector types

⚠ Please read "Caution for your safety" in operation manual before using.

■ Specifications

※The model name with '-C' is connector type.
 ※MST-□ is sold separately.

Transparent Glass Sensing/BGS Reflective/Micro Spot Type

■ Features

■ BGS reflective type

- BGS (background suppression) minimizes detection errors from Zbackground objects and the color or material of target objects. Also the detecting distance can be configured with the sensitivity adjuster.
- Visible light source allows users to identify the sensing area, and the tiny spot size minimizes influence from surrounding objects

■ Transparent glass sensing type / Micro spot type

- Stable detection of transparent targets (LCD, PDP, glass etc.) (transparent glass sensing types)
- Check sensing area with visible micro spot (micro spot types)
- Detect tiny objects (minimum target size: Ø0.2mm copper wire)

■ Commonness

- Compact size: W10.6 × H32 × L20mm
- Light ON/Dark ON operation mode switch (except BJG30-DDT)
- Sensitivity adjuster (except BJG3-DDT)
- Built-in reverse polarity protection circuit and output overcurrent (short-circuit) protection circuit
- Mutual interference prevention function (except BGS reflective type)
- Excellent noise immunity and minimal influence from ambient light
- IP65 protection structure (IEC standard)

⚠ Please read "Caution for your safety" in operation manual before using.

■ Operation Timing Diagram

● Through-beam type

● Retroreflective/Diffuse/Narrow beam/ BGS reflective type

※The waveforms of "Operation indicator" and "Transistor output" are for Light ON operation.
They are opposite operation for Dark ON operation.

■ Mounting And Sensitivity Adjustment

◎ For mounting

Please use bolts M3 for
mounting of sensor,
set the tightening torque under 0.5N·m.

Long Sensing Distance/BGS Reflective/Micro Spot Type

☉ Switching of operation mode

Light ON operation		Turn the operation mode switch to the end of right (L direction), it is set as Light ON.
Dark ON operation		Turn the operation mode switch to the end of left (D direction), it is set as Dark ON.

※For through-beam type, the operation mode switch is built-in the receiver.

☉ Optical axis adjustment

● Through-beam type

- Place the emitter and the receiver facing each other and supply the power.
- After adjusting the position of the emitter and the receiver and checking their stable indicating range, mount them in the middle of the range.

- After mounting this unit, check the operation of the sensor and lighting of the stability indicator in both status. (none or sensing target status)

※When the sensing target is translucent or small (under sensing target of '■ Specifications'), it may not be detected by the sensor because the light can penetrate it.

● Retroreflective type

- Place the sensor and the reflector (or reflective tape) facing each other and supply the power.
- After adjusting the position of the sensor and reflector (or reflective tape) and checking their stable indicating range, mount them in the middle of the range. (none or sensing target status)
- After mounting this unit, check the operation of the sensor and in both status. (none or sensing target status)

※Please use reflective tape (MST Series) for where a reflector is not installed.

● Diffuse/Narrow beam/BGS reflective type

After placing a sensing target, adjust the sensor to up or down, right or left. Then, fix the sensor in the center of position where the stability is operating.

● Object (copper wire) detection <Micro spot type>

※Mount the sensor slanted at an angle ranged 0 to 15° shown above as [Figure 2] for stable detection to detect as shown in [Figure 1].

■ Sensitivity Adjustment

Order	Position	Description
1	(A) 	Turn the sensitivity adjuster to the right of min. and check position (A) where the operation indicator is turned ON in "Light ON status".
2	(A) (B) (C) 	Turn the sensitivity adjuster more to the right of position (A), check position (B) where the operation indicator is turned ON. And turn the sensitivity adjuster to the left, check position (C) where the operation indicator is turned OFF in "Light OFF status". ※If the operation indicator is not turned ON although the sensitivity adjuster is turned to the max. position, the max. position is (C).
3	Optimal sensitivity (A) (C) 	Set the sensitivity adjuster at the center of (A) and (C). To set the optimum sensitivity, check the operation and lighting of stability indicator with sensing target or without it. If the stability indicator is not turned ON, please check the sensing method again because sensitivity is unstable.

※No sensitivity adjustment function available for BJJ30-DDT models.

	Light ON status	Light OFF status
Through-beam type		
Retro-reflective type		
Diffuse/Narrow beam/BGS reflective		

※Set the sensitivity to operate in stable light ON area and the reliability for the environment (temperature, voltage, dust etc) is increased. In unstable light ON area, be sure to check the variation of environment.

※Do not apply excessive force on the sensitivity adjuster or operation mode switch, they may be broken.

※Please use reflective tape (MST Series) for where a reflector is not installed.

■ Reflectivity By Reflective Tape Model

MST-50-10(50×50mm)	40%
MST-100-5(100×100mm)	60%
MST-200-2(200×200mm)	100%

※This reflectivity is based on the reflector (MS-2A).

※Reflectivity may vary depending on usage environment and installation conditions.

The sensing distance and minimum sensing target size increase as the size of the tape increases.

Please check the reflectivity before using reflective tapes.

※For using reflective tape, installation distance should be min. 20mm.
